**Prefix, Number and Name of Course:** ACM 661  Survival Analysis

**Credit Hours:** 1  
**In Class Instructional Hours:** 1  
**Labs:** 0  
**Field Work:** 0

**Catalogue Description:**
*Prerequisite:* MAT 202 or equivalent
Survival and Hazard functions, life tables, Kaplan-Meier survival analysis, Cox regression proportional hazards model and Cox regression with time-dependent variables, comparison with logistic regression approaches.

**Reasons for addition:**
To create a one-semester-hour module for the graduate Professional Applied and Computational Mathematics program where students will formulate and solve real life problems in various settings using an analytic approach called survival analysis which is a collection of statistical procedures for data analysis in which the outcome variable of interest is *time until an event occurs*.

<tbody>
<tr>
<td>Students will:</td>
<td></td>
<td></td>
</tr>
<tr>
<td>1. discriminate the type of analytic problems addressed by survival analysis.</td>
<td>I - VI</td>
<td>Individual homework assignments, group work, examinations and computer projects.</td>
</tr>
<tr>
<td>2. use the Life Table Method of analysis.</td>
<td>II, VI</td>
<td>Individual homework assignments, group work, examinations and computer projects.</td>
</tr>
<tr>
<td>3. use Kaplan-Meier survival analysis.</td>
<td>III, VI</td>
<td>Individual homework assignments, group work, examinations and computer projects.</td>
</tr>
<tr>
<td>4. use the Cox Regression Proportional Hazards Model and the model with time-dependent variables.</td>
<td>IV - VI</td>
<td>Individual homework assignments, group work, examinations and computer projects.</td>
</tr>
<tr>
<td>5. examine and experiment on how statistical software can be used in the field.</td>
<td>III.</td>
<td>Individual homework assignments, group work, examinations and computer projects.</td>
</tr>
</tbody>
</table>

**Course Content:**
1. Introduction to survival analysis
A. Censored data
B. Survival and hazard functions
C. Goals of survival analysis

II. Life tables
   A. Assumptions needed to use the life table
   B. Lost to follow-up
   C. Plotting and comparing survival functions

III. Kaplan-Meier survival analysis
   A. Kaplan-Meier estimators
   B. Comparing survival distributions - log-rank test

IV. Cox regression - proportional hazards (PH) model
   A. Maximum likelihood estimation of the Cox PH model
   B. Evaluating the PH assumption
   C. Graphical displays - examination of residuals
   D. The stratified Cox procedure
   E. The no-interaction assumption and how to test it

V. Cox regression - Time-Dependent variables

VI. Use of statistical software
